

Encrypting a file can be done in 4 easy steps!

1. Download and install 7-zip. That latest version can be found at <http://www.7-zip.org/download.html>
2. Right click on the file you want to encrypt, hover over 7-Zip, and click "Add to archive..."

3. Change the archive format from 7z to zip. Create a password and enter it into the two boxes under encryption. Change the encryption method from ZipCrypto to AES-256. Click "OK".

4. Email the newly created zip file to whomever will be receiving it and call them to give them the password.
